

### SEDIMENT RISK CATEGORY EXPLANATION

Under Order No. R5-2014-0300, the Central Valley Regional Water Board requires certified Sediment & Erosion Control Plans (SECPs) to be completed and kept on-site for parcels identified as having the potential to discharge sediment to off-farm surface waters. Please reference the enclosed cover sheet to identify the sediment risk category(ies) for each of your enrolled parcels that require a plan.

CATEGORY	DESCRIPTION
A	The Sacramento Valley Sediment Discharge and Erosion Assessment Report (SDEAR) completed in June 2015 assessed <b>the potential of sediment discharges</b> from irrigated agricultural lands. The SDEAR utilized the USDA NRCS Revised Universal Soil Loss (RUSLE) model to conservatively determine which parcels have the potential for soil loss of 5 tons per acre/per year. <b>Plan Completion &amp; Implementation Deadline March 2, 2017.</b>
B	<b>“YES”</b> response to Question 3 on Part A of 2015 Farm Evaluation <i>“Does your farm have the potential to discharge sediment to off-farm surface waters?”</i> (indicating your property has the potential to discharge sediment to off-farm surface waters). If “B” is the only identified sediment risk category, and response upon further consideration of Question 3 on 2016 Farm Evaluation is <b>“NO”</b> , SECP will not be required at this time. <b>Plan Completion &amp; Implementation Deadline March 2, 2017.</b>
C1	The parcel is adjacent to a major surface water body. <b>Plan Completion &amp; Implementation Deadline March 2, 2017.</b>
C2	The parcel is adjacent to a tributary to a major surface water body. <b>Plan Completion &amp; Implementation Deadline December 31, 2017.</b>
C3	The parcel is adjacent to any other named surface water body. <b>Plan Completion &amp; Implementation Deadline December 31, 2018.</b>

The Regional Board recognizes following exemptions to the requirement to complete a SECP:

- The parcel is a wetland.
- The parcel has zero irrigated acres

There are specific requirements to qualify for the two exemptions listed below (including notifying the Coalition that you believe your parcel qualifies for an exemption). Dixon/Solano RCD Coalition recommends members attend the self-certification training to better understand the criteria and process for these exemptions:

- The parcel is isolated topographically or protected by a hydraulic barrier and the parcel does not discharge tailwater.
- The parcel has natural riparian vegetation that prohibits sediment discharges or erosion.

If you have questions you may contact Kelly Huff at (707) 678-1655 x102 or Martha McKeen at x103.

**CERTIFICATION OF**  
**INDIVIDUAL SEDIMENT & EROSION CONTROL PLANS**

The Sediment and Erosion Control Plan (SECP) must be prepared in one of the following ways (see Page 7 of SECP template for details):

- Adhere to site-specific recommendations from NRCS, RCD, UCCE
- **Be prepared and self-certified by the member who has completed a training\***
- Be written, amended and certified by a qualified professional possessing specific registrations or certifications, and appropriate experience with erosion issues on irrigated agricultural lands. List of qualified professionals available at [www.dixonrkd.org/irrigated-lands-program](http://www.dixonrkd.org/irrigated-lands-program)

The plan IS NOT SUBMITTED TO THE COALITION. A copy of the SECP shall be maintained at the farming operations headquarters or primary place of business; and must be produced by the Member, if requested, should Central Valley Water Board staff, or an authorized representative, conduct an inspection of the Member’s irrigated lands operation. The plan is required to be updated as conditions change.

**DIXON/SOLANO RCD WATER QUALITY COALITION**  
**SEDIMENT & EROSION CONTROL PLAN SELF-CERTIFICATION TRAINING**  
**THURSDAY FEBRUARY 23, 2017**

Thurs. – Feb. 23rd	8 AM – 1PM	<b>SEDIMENT SELF-CERTIFICATION</b> <i>(includes test)</i>	Members with March 2017 sediment/erosion control plan deadline	<b>American Legion Hall</b> <b>1305 N. 1st Street</b> <b>Dixon, CA 95620</b>
--------------------	------------	--	--	--

**EDUCATION EVENTS – LIMITED SPACE AVAILABLE, RSVP REQUIRED!**  
**Contact Martha @ (707) 678-1655 x103 or [martha-mckeen@dixonrkd.org](mailto:martha-mckeen@dixonrkd.org)**

\* We highly recommend that all members required to complete an SECP attend this course as a first step. If the scheduled training date does not work for you please contact us. If you prefer to hire a qualified professional please visit our website for a list of local qualified professionals. Fillable PDF versions of the SECP are available on our website [www.dixonrkd.org/irrigated-lands-program](http://www.dixonrkd.org/irrigated-lands-program)

# Template for Sediment and Erosion Control Plan

## General Instructions

**Introduction:** Soil erosion and sediment deposition from farmlands can contribute to degraded surface water quality. Sediment delivery is known to be relatively high in areas where there are steep slopes, erodible soils, or rainfall runoff activity. Dirt roads, stream crossings, and other areas of disturbed ground where bare soils are susceptible to the erosive action of flowing water can also be contributors of sediment to water bodies.

A Sediment Discharge and Erosion Assessment Report (**SDEAR**) was prepared by your water quality Third-Party Group/Coalition and approved by the Regional Water Quality Control Board (**Water Board**) as required by the General Order. Based on the approved SDEAR, it was determined that agricultural lands in the area you farm are prone to erosion and possible discharge of sediment and which could degrade surface water quality. Because of that potential, you are required to use this template to prepare and have certified a Sediment and Erosion Control Plan (**SECP** or **Plan**) for the parcels. The Plan must be maintained at the farming operation's headquarters or primary place of business. **DO NOT SUBMIT THIS PLAN TO YOUR COALITION.** Upon request, the Plan must be made available to the Water Board or an authorized representative, should they conduct an inspection of your farming operation.

The Plan will help identify the erosion sources and potential locations of sediment discharge that could affect the quality of storm water and irrigation water discharges off your farm lands. As part of the Plan, you are asked to document the management practices you have or plan to implement based on the potential for sediment discharge and erosion from your parcels. The plan development must adequately address your operation and must be implemented to address site specific conditions.

## Section Instructions

### Section 1: General Information

- a. Fill in or update any parcels and/or corresponding field(s) which have been identified as requiring a Sediment Discharge and Erosion Control Plan.
- b. Provide any additional information pertinent to the site under General Information Comments.

### Section 2: On-farm Sediment and Erosion Management Practices

- a. Use this list of *On-farm Sediment and Erosion Control Practices* to identify all the sediment and erosion control practices currently implemented and proposed to be implemented on the parcels identified in Section 1.
- b. Insert the Management Practice Code into the table in Section 3.

Contact Coalition for assistance with maps.

### Section 3: Sediment and Erosion Control Site Evaluation

- a. Attach a map of your farming operation (you can use the map that was a part of your Farm Evaluation Survey, or draw/develop a map of your farming operation). The map should show parcel(s) outlines and include the Assessors Parcel Number (APN), and Field ID.
- b. Use the evaluation table provided to determine areas of your operation that are prone to erosion and sediment discharge and that require further evaluation on your part.
- c. The table lists several suggested sites (provide your own site-specific locations if necessary) to be evaluated; they may require you to visit the location to determine if different management

practices are needed to minimize the transport of sediment from the evaluated areas and into adjacent streams, channels, or drains.

- d. Assign a Location ID Point to that site in the table and on the attached map that you are evaluating. The *Location ID Points* are consecutive numbers assigned to the locations.
- e. The practices recorded in this Plan should correspond to the Location ID Points on the map. The ID point will become a reference that can be used to locate the site if future evaluation is needed.
- f. Using the appropriate Management Practice ID Code from Section 2, identify which Management Practices (if any) are currently being employed at the site; also identify the Management Practice(s) proposed to mitigate the sediment discharge and/or erosion and place the appropriate code(s) in the table.
- g. Lastly, provide the date you propose that the new Management Practice(s) will be fully implemented.

#### **Section 4: Sediment and Erosion Control Plan Certification**

Using the boxes, identify the method used to complete the Plan, provide the required information and sign. The Plan must be prepared in one of the following ways:

- (1)** The Plan must adhere to the site-specific recommendations provided by the listed agency. The Member must retain written documentation of the site-specific recommendation provided and certify that they are implementing the recommendations; or
- (2)** The Plan must be written, amended, and certified by a qualified professional possessing the required registrations or certifications and have appropriate experience with erosion issues on irrigated agricultural lands; or
- (3)** The Plan must be prepared and self-certified by the Member, who has completed a training program that the Executive Officer of the Water Board concurs provides necessary training for sediment and erosion control plan development; or
- (4)** The Plan must be prepared and certified in an alternative manner approved by the Executive Officer. Such approval will be provided based on the Executive Officer's determination that the alternative method for preparing the Plan meets the objectives and requirements of the Order.

## Sediment and Erosion Control Plan (SECP) Template

**Member Name:** \_\_\_\_\_

**1. General Information:**

Provide the required information where indicated.

Parcel (APN)	Field ID(s)
_____	_____
_____	_____

**2. On-farm Sediment and Erosion Management Practices:**

Use these Practice Codes to insert into the table in Section 3.

Management Practice Code	Inventory of Sediment and Erosion Control Practices
<b>Current Irrigation Infrastructure Practices</b>	
I-1	Drip/microspray irrigation installed and used.
I-2	Use of irrigation equipment (sprinklers, micro-sprinklers, emitters, etc.) to match soil infiltration rates as much as possible to prevent runoff.
I-3	Recirculation systems are used to keep sediment and farm inputs on site. Water is recirculated to irrigate other fields.
I-4	In-furrow dams are used to increase infiltration and settling out of sediment prior to entering the tail ditch.
I-5	Storm water is captured using field borders to reduce runoff and supplement field irrigation.
I-6	Use of flow dissipaters to minimize erosion at discharge point.
I-7	Shorter irrigation runs are used with checks to manage and capture flows.
I-8	Land grading has been done to increase irrigation efficiency and improve control of drainage.
I-9	Fields are planted on the contour to reduce runoff.
I-10	Crop rows are graded, directed and at a length that will optimize the use of rain and irrigation water.
I-11	Berms are constructed at low ends of fields to capture runoff and trap sediment.
I-12	Vegetative filter strips and buffers are used to capture flows.
I-13	Subsurface pipelines are used to channel runoff water.
I-14	Hedgerows or trees are used to help stabilize soils and trap sediment movement.
I-15	Sediment basins / holding ponds are used to settle out sediment and hydrophobic pesticides such as pyrethroids from irrigation and storm runoff.
I-16	Other irrigation practices (attach additional sheets if necessary to list and describe practices):
<b>Current Irrigation Management Practices</b>	
M-1	Use of irrigation scheduling methods and equipment to match irrigations to crop needs where possible.
M-2	The time between pesticide applications and the next irrigation is lengthened as much as possible to mitigate runoff of pesticide residue.
M-3	Vegetated ditches are used to remove sediment as well as water soluble pesticides, phosphate fertilizers and some forms of nitrogen.
M-4	Cover crops or native vegetation are used to reduce erosion.
M-5	Soil water penetration has been increased through the use of amendments, deep ripping and/or aeration.
M-6	PAM (polyacrylamide) used in furrow and flood irrigated fields to help bind sediment and increase infiltration.
M-7	Minimum tillage incorporated to minimize erosion.
M-8	Other irrigation management practices (attach additional sheets if necessary to list and describe practices):
<b>Other Practices</b>	
O-1	Grade access roads to reduce on-road erosion.
O-2	Control concentrated drainage on roads with culverts, rolling dips, etc.
O-3	Direct drainage off road to vegetated area, ditches, sediment basins, etc.
O-4	Protect roads in rainy season by seeding roads, rice straw, gravel, avoid use, etc.
O-5	Check culverts in rainy season to ensure they are not plugged with debris.
O-6	Minimize erosion downstream of culverts by using energy dissipaters.
O-7	Remove/avoid stream crossings wherever possible. *
O-8	Creek banks and stream banks have been stabilized. *

\* Federal and state permits may be required prior to conducting work in surface waters (e.g. bank stabilization, crossings). If an United States Army Corps of Engineers permit, or any other federal permit, is required due to the disturbance (in-water work) of waters of the United States (such as streams and wetlands), then a Water Quality Certification must be obtained from the Central Valley Water Board prior to initiation of project activities. For questions regarding Water Quality Certification, contact the Central Valley Water Board Certifications Unit, Elizabeth Lee ([Elizabeth.Lee@waterboards.ca.gov](mailto:Elizabeth.Lee@waterboards.ca.gov)).
